

NovaStar® TS NIV Full-Face Mask

Ultimate comfort and effective seal through customized fit and silicone-gel cushion

NovaStar thermostable (TS) NIV full-face mask is designed for non-invasive ventilation therapy. Because the mask covers the nose and mouth, it provides effective therapy, even in case of mouth breathing.

According to the re-processing methods the NovaStar TS NIV full-face masks are for multi-patient use. They can be thermally disinfected with hot steam at a given temperature or chemically disinfected with the listed disinfections (see the Cleaning and Disinfecting Instructions).

The Dräger Sizing Gauge helps you to choose the right mask size - there is no need to open the mask package.

- NovaStar TS NIV masks are the first full-face masks (covering mouth and nose) by Dräger with a very soft silicone-gel filled mask cushion in institutional/hospital use.
- The pliable ring embedded inside the flexible, clear mask body allows the mask to be bent and adjusted individually to the patient's face ("customized fit"). This customized fit minimizes leakage and maximizes comfort.

- The thumb wheel enables a gradual adaptation of the forehead support in order to find the most comfortable position for your patient.
- The forehead pad stabilizes the mask; it has a soft silicone-gel cushion and bends to match the patient's forehead curve.
- The magnetic clips provide an easy and safe fastening of NovaStar TS NIV full-face masks. In case of emergency, the self-aligning magnetic clips can be opened fast or closed securely.
- The 4-point headgear with two Velcro® and two magnetic clips are suitable for all sizes within the SE or AAV lines.

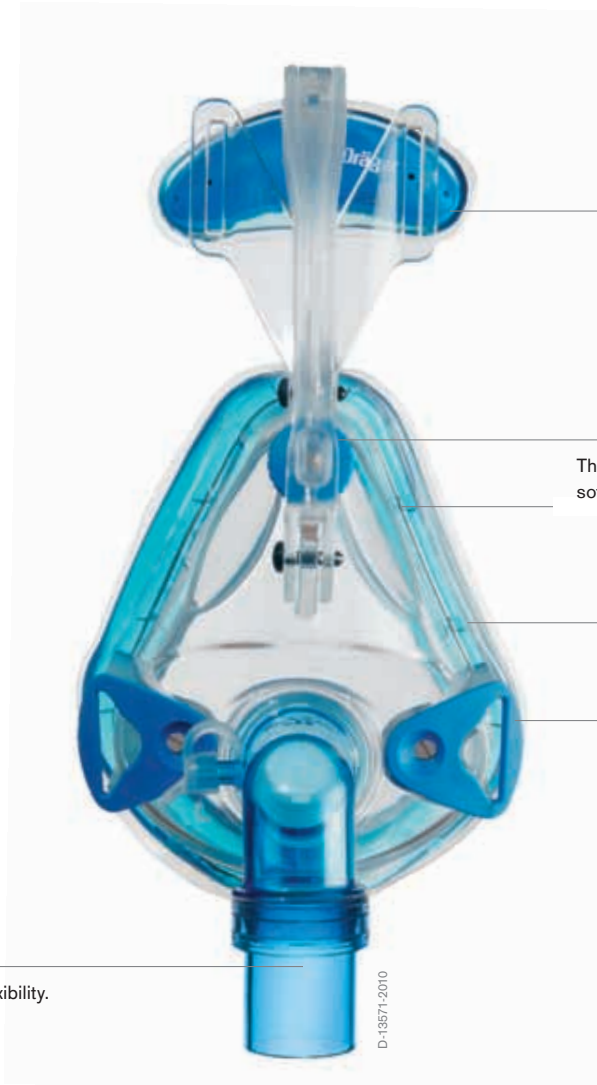

NovaStar® TS NIV full-face mask with Standard Elbow

NovaStar® TS NIV full-face mask with Anti-Asphyxia Valve

NovaStar® TS SE (Standard Elbow)

The blue elbow indicates that the mask has neither an Anti-Asphyxia Valve nor exhalation ports.

Adjustable forehead support and forehead pad provide a comfortable fit to the patient's forehead curve.

The pliable ring embedded inside the flexible and soft mask body allows an individual adjustment to the patient's face (cf. picture below). After adjustment, the mask stays in position.

Magnetic clips for headgear attachments provide easy positioning and removal of the mask.

360° moveable Standard Elbow for more flexibility.

D-13871-2010

NovaStar® TS AAV (Anti-Asphyxia Valve)

The white transparent elbow includes an Anti-Asphyxia Valve that ensures convenient access to room air in the event of reduced pressure (< 3 cm H₂O). Exhalation ports maintain CO₂ elimination during non-invasive ventilation.

Thumb wheel to adapt the forehead support. There is a little block at the end to prevent the wheel from coming off.

Silicone-gel mask cushion provides high comfort and effective seal.

Exhalation ports maintain CO₂ elimination.

Anti-Asphyxia Valve provides access to room air in case of reduced pressure.

360° moveable elbow with Anti-Asphyxia Valve for more flexibility.

Individual adaptation (formability) of the NovaStar® TS NIV full-face masks (SE and AAV)

NovaStar® TS NIV full-face mask

Pliable and adjustable forehead support – mask stays in position

Pliable and adjustable mask body for individual adaptation to the patient's face - mask stays in position
