

Pack2Go™

Invasive and Non-invasive Ventilation Packs

The future of ventilation accessories:
Evita and Carina ventilation packages.

Dräger has developed an extensive portfolio of ventilation accessories for single patient use. In order to simplify breathing support, Dräger now provides a one-stop solution for invasive and non-invasive ventilation for its Evita and Carina ventilators with the new Pack2Go product lines.

Hospitals can now simply order single patient use ventilation accessories in the form of Pack2Go packages. This concept supports the hospitals' logistics and clinical processes as well as their cost structures.

- All required products (e. g. Evita ventilator and necessary accessories) are supplied by Dräger, one-stop.
- Changing the ventilator from one patient to the next will be available in one-step, without sterilization delays or time-consuming assembling activities.

- Using Pack2Go solutions with their components for single patient use can support hospitals in preventing cross-contamination, assuring that only clinically clean respiratory products will be used by caregivers.¹⁾
- All products are compatibel tested with the relevant Dräger ventilator(s) and manufactured to meet the highest standards in medical technology and to ensure patient safety

¹⁾ In intensive care units worldwide, nosocomial infections pose a serious health challenge to patients and caregivers, complicating recovery, prolonging hospital stay and raising medical costs. Ventilator associated pneumonia is the most common type of nosocomial infections in ICUs in the U.S. and Europe. Preventive procedures include the **avoidance of cross-contamination** as well as the maintenance and care of the artificial airway.
